SUMMARY

Technology and operations leader with 15+ years architecting identity, multi-cloud, and security solutions and the internal platforms organizations depend on. Google Cloud Professional Cloud Architect; AWS and Azure certified. I've owned the multi-cloud estate, led the migrations, and made the build-vs-buy calls from the customer's side of the table.

EXPERIENCE

Tillster

Los Angeles, CA (Remote) · 2019–Present

Senior IT Technical Project Manager (2024–Present) · Manager, Enterprise IT (2022–2024) · Lead Enterprise IT Engineer (2019–2022)

Own the technology function for a commerce platform serving 100+ brands across 40,000+ locations; CEO/President-facing.

- Retired a six-figure commercial identity-governance product by designing and building an HR-driven identity lifecycle platform on Microsoft Entra ID and Graph that automates the full joiner-mover-leaver flow across the workforce.
- Delivered \$1M+ in realized cloud and SaaS savings on a ~\$300K/month AWS estate by leading architecture review, rightsizing, commitment planning, and vendor renegotiation.
- Consolidated 10+ enterprise systems into a single real-time view of IT and security health by architecting a leadership observability platform (FastAPI + React on Google Cloud Run and Cloud SQL).
- Cut cloud-migration risk to near zero by building AWS-to-Google-Cloud and hybrid-to-cloud-only migration tooling, including an embedded AI diagnostic assistant adopted by the support team.
- Secured the customer-facing commerce platform end to end, owning identity, SSO/authorization, and the PCI-scoped payment environment (Auth0).
- Led security incident response and forensic investigations through real events, including an executive-targeted business email compromise.
- Built and led a team of five engineers and established the automation-first, build-vs-buy approach that still defines the function.

TrueCar

Santa Monica, CA · 2018–2019

IT Support Analyst. Systems administration for a national automotive-technology platform.

Doner
